

## Stewart Now Portal Update!

**Stewart Now Web Portal** is getting new enhancements on **May 7th, 2020**, to improve user-experience.

### Stewart Now Portal Enhancements

After the updates, you'll notice:

- In the menu, a new option called **Smart Farms** has been added. When you click on this option, a screen will display where you can view **Smart Farms** data that you saved in the **Mobile App**. You can also **export** this report in an Excel Spreadsheet.
- If a **non-consumer user** attempts to create a new account using an email address that **exists once** for an active User, they will be directed to reset their password instead of allowing a duplicate user to be created. If the email address entered is found to already exists **multiple times**, the new user will be asked to contact **Stewart Now Support**.
- The **Order Snapshot** page has been optimized, resulting in the Snapshot page to open more quickly than before.
- **Business Source** will no longer show up in the **Weekly Transaction Summary Report**.
